

Siemens Healthineers builds modern logistics hall in Kemnath, Germany

Siemens Healthineers is responding to the structurally growing demand for its imaging products. At its Kemnath location, the medical technology company has started construction of a new logistics hall. This is planned as an extension to the existing production facility and has a gross floor space of roughly 3,500 sq. m.

“As a market and technology leader in many fields, Siemens Healthineers is particularly benefiting from the structural growth in the healthcare market. The current coronavirus crisis demonstrates very clearly the importance of the contribution we are making to society with our products and solutions. Our products help save lives and improve health,” says Christoph Zindel, member of the Managing Board at Siemens Healthineers. “With this investment, we’re both highlighting our commitment to the location and offering a sign of stability in times that are difficult for everyone.”

The plans are for an automated small-part warehouse in combination with a high bay warehouse for storing and order picking high-volume parts, such as circuit boards and screws. The company in Kemnath is currently resorting to external storage resources that are more and more approaching their capacity limits. The new hall will be built according to state-of-the-art technical standards and will substantially improve efficiency at the location, for example through the use of automated tow trains. The facilities will be ready for occupancy in the second half of 2021. The project volume totals over 12 million euros.

The Kemnath factory in the Upper Palatinate region was founded in 1962 and has since developed from a simple contract manufacturer into the Competence Center for Mechatronics and covers broad sections of the Siemens Healthineers product portfolio. The components manufactured in Kemnath include, for example, C-arms for angiography systems and tables

for magnetic resonance tomographs, as well as components for analysis systems used in laboratory diagnostics. Siemens Healthineers currently employs more than 1,200 people at this location.

Siemens Healthineers AG (listed in Frankfurt, Germany: SHL) is shaping the future of Healthcare. As a leading medical technology company headquartered in Erlangen, Germany, Siemens Healthineers enables healthcare providers worldwide through its regional companies to increase value by empowering them on their journey towards expanding precision medicine, transforming care delivery, improving the patient experience, and digitalizing healthcare. Siemens Healthineers is continuously developing its product and service portfolio, with AI-supported applications and digital offerings that play an increasingly important role in the next generation of medical technology. These new applications will enhance the company's foundation in in-vitro diagnostic, image-guided therapy, and in-vivo diagnostics. Siemens Healthineers also provides a range of services and solutions to enhance healthcare providers ability to provide high-quality, efficient care to patients. In fiscal 2019, which ended on September 30, 2019, Siemens Healthineers, which has approximately 52,000 employees worldwide, generated revenue of €14.5 billion and adjusted profit of €2.5 billion.
