

Siemens Healthineers opens state-of-the-art education and development center in Erlangen, Germany

- **Siemens Healthineers invests in training and counteracts the shortages in workforces**
- **Positioning as leading training company strengthens its attractiveness as an employer**
- **Investment of around 60 million euros over a three-year construction period**

Siemens Healthineers is opening its new Education & Development Center (EDC) in Erlangen today. The open-plan building offers space for the currently 240 trainees and integrated degree program participants in Erlangen and Forchheim. In addition, the new center houses training courses for customers and in-house specialists around 150 participants and users can be trained daily on medical devices. The EDC is an extension of the existing education and training center with Erlangen being one of the company's three global training centers and the central location for education in Germany with a focus on IT, electronics and business administration. Investing in in-house training is a building block in Siemens Healthineers' strategy to counteract the predicted shortage of skilled workers. The construction period of the building was three years with an investment of about 60 million euros.

"We want to continue to be one of the most attractive employers in the region and in Germany. Lifelong learning for our employees is our focus. That's why we invest in high-quality training opportunities in an appealing working environment that benefit customers and employees alike. Erlangen and the region is and will remain a global hotspot for innovative medical technology," said Elisabeth Staudinger, Member of the Managing Board of Siemens Healthineers, at the official opening. Among the approximately 80 invited guests were the Mayor of the City of Erlangen, Florian Janik, and Markus Gruber, Head of the Bavarian State Ministry for Family Affairs, Labor and Social Affairs.

The training and further education center was built according to the latest construction standards and is to be awarded the "LEED Gold" sustainability certificate. The building is located in the "Siemens Healthineers Quarter" in the north of Erlangen opposite of the factory for magnetic resonance imaging scanners on Allee am Röthelheimpark. Due to the proximity to production, a close integration between practical and theoretical training is ensured. The 11,000 square meters of space of the EDC are spread over seven floors and has among others, ten fully functional magnetic resonance imaging scanners and two angiography systems for training purposes. A photon-counting computed tomograph of the latest generation is also housed in the building. In addition, five large training rooms offer space for virtual courses with cameras and state-of-the-art transmission technology. Siemens Healthineers also offers digital training with the support of VR glasses or simulators. In the training areas on the upper floors there are five electrical laboratories, a technical project room and four further training rooms. Siemens Healthineers offers apprenticeships for commercial and technical professions as well as integrated degree programs in the business, IT and technical fields. In September, 185 new apprentices and dual students will start their training at Siemens Healthineers in Germany, 120 of them in Erlangen and Forchheim.

Siemens Healthineers AG (listed in Frankfurt, Germany: SHL) pioneers breakthroughs in healthcare. For everyone. Everywhere. As a leading medical technology company headquartered in Erlangen, Germany, Siemens Healthineers and its regional companies are continuously developing their product and service portfolio, with AI-supported applications and digital offerings that play an increasingly important role in the next generation of medical technology. These new applications will enhance the company's foundation in in-vitro diagnostics, image-guided therapy, in-vivo diagnostics, and innovative cancer care. Siemens Healthineers also provides a range of services and solutions to enhance healthcare providers' ability to provide high-quality, efficient care. In fiscal 2022, which ended on September 30, 2022, Siemens Healthineers, which has approximately 69,500 employees worldwide, generated revenue of around €21.7 billion and adjusted EBIT of almost €3.7 billion.
