

European Congress of Radiology (ECR), July 13-17, 2022

Siemens Healthineers broadens access to care with new affordable X-ray system Multix Impact E

- **Entry-level, fully digital X-ray imaging at a very compelling price point**
- **No compromises in image quality**

Siemens Healthineers launches its most affordable X-ray system yet at this year's European Congress of Radiology (ECR) in Vienna. The system is designed to enable wider access to care.

"We are already using a Siemens Healthineers X-ray system and are very happy with the image quality and low dose functionalities. Multix Impact E and its focus on essential operations and workflows, helps us cope with rising patient numbers efficiently - and thus it can be an ideal second system for us", says Musa Msimuko, Head of imaging at the CFB Medical Centre, Lusaka, Zambia.

The fixed-table system with a floor-mounted tube and optional bucky wall stand make Multix Impact E a highly versatile package. Many further optional components are available to tailor the system to healthcare providers' needs and, with its small footprint, it can be installed with minimal effort almost anywhere. At the core of every Multix Impact E is the full-size digital detector, enabling excellent image quality at a low dose.

"In many places, computed radiography or even analog radiography are still the standard, or imaging is not available at all: Going fully digital in affordable systems tackling these issues is an obvious step, as it drastically reduces the time from image acquisition to the actual image. Patients and physicians get the necessary answers faster, and the resources in the hospital can be used more efficiently", says Verena Schön, Head of X-ray Products at Siemens Healthineers. "At the same time, Multix Impact E offers high-quality imaging not seen before in this price bracket" she continues.
